Refer to the glossary of terms if you are not familiar with some of the

**Blueberry Production**

Purchasing Plants • Purchase two-year-old bare root or potted plants • Purchase from reputable nurseries that practice virus testing • Blueberry viruses can destroy a planting if they are brought in • Plant more than one variety to provide for

**ID-210: Midwest Blueberry Production Guide**

able for commercial production, wild blueberries were used to supply the market demand. Highbush blueberry cultivation and breeding programs, which began in the early 1900s, paved the way for the modern blueberry industry. Early blueberry production was limited to the eastern United States and Upper Midwest, but with the new cultivars

**Blueberry - UF/IFAS Extension**

This pruning should be done in winter when plants are dormant and consists of removing about 25% of the older canes down to the ground. This will encourage new canes to sprout which will be vigorous in growth and more productive in fruiting. UF/IFAS Publications: Blueberry Gardener's Guide, Blueberry Pest Management, Blueberry Varieties for Florida.

**Home Blueberry Production in Louisiana**

Home Blueberry Production in Louisiana. Figure 1: Pruning at planting. Remove low, twiggy growth entirely and tip remaining shoots to remove all the flower buds. About 1/2 to 1/3 of the plant top should be removed in this process. Mulch 4 inches deep with pine needles or pine bark after planting. Plant Selection and Establishment.

**Raspberry and Blackberry Production Guide**

on large plantings, particularly in the pruning and harvest seasons. Because bramble production requires a high initial investment and returns are slow at first, long-term management of capital is required. However, raspberries and blackberries can be sold for a greater price per pound than just about any fruit, and new production techniques

**BLUEBERRIES - Washington State University**

Full production occurs in 6 - 8 years. Plants produce for 10 - 15 years. Potential yield is 1 gallon per plant. Moderate yearly pruning keeps blueberries healthy and productive. Prune in late winter or early spring before new growth begins. Canes are most productive during their 2 - 3 growing seasons.

**An Overview of the BC Highbush Blueberry Industry - BC ...**

acidic soil is critical for successful blueberry production. Drainage and irrigation systems, raised planting beds and sawdust mulches are commonly

---

used to maximize ideal growing conditions Plants are supported by trellis wires to hold the branches upright for machine harvesting Annual winter pruning maintains yields and berry size,

### **Blueberry Physiology, Production**

machine harvest efficiency, alternative production practices, plant nutrition, cold hardiness, and organic production systems She has published many scientific articles on berry crop production and physiology and the extension publications and blueberry pruning video she has co-authored are widely distributed worldwide

### **Pruning Wild Blueberries: Principles and Practices**

Commercial pruning is possible because the blueberry can tolerate removal of above ground plant parts The initial response to pruning is the production of new vigorous stems that grow vegetatively during the first growing season following pruning The greatest amount of new

### **Organic Blueberry Production - United Diversity**

blueberry production, designed to supplement information from conventional sources on basic cultivation practices Matters such as pruning, training, variety choice, sources of propagation material, and planting are essentially the same in both organic and conventional culture Generic blueberry information can be obtained from the
