13.4 Gene Regulation and Expression

RNAi technology holds the promise of allowing scientists to turn off the expression of genes from viruses and cancer cells, and it may provide new ways to treat and perhaps even cure diseases Genetic Control of Development Regulating gene expression is especially important in shaping the way a multicellular organism develops

Chapter 18: Regulation of Gene Expression

transcriptional control in the form of RNA processing that is absent in prokaryotes In addition, eukaryotes have a greater variety of control mechanisms operating before transcription and after translation Gene expression is commonly controlled through chromatin modification, transcription, RNA processing, transport of mRNA to the cytoplasm,

CHAPTER 16 Gene Regulation in Prokaryotes

constitutive expression called the basal level Binding of RNA poly-merase is the rate limiting step in this case (Figure 16-1a) To control expression from such a promoter, a repressor need only bind to a site overlapping the region bound by polymerase In that way repressor blocks polymerase binding to the promoter, thereby
